The Trident is the official newsletter of the Long Beach Neptunes, a non-prophet organization. The Trident is published monthly and is provided free of charge to the members of the Long Beach Neptunes and associates.

2021 CALENDAR

- April 7th Monthly Club Meeting 7PM
 IN PERSON at Me 'n' Ed's Pizzeria
- April 30th Deadline for Lobster Card Submission
- June 5th Blue Water Meet
- June 15th Limit on White Seabass (atractoscion nobilis) increases to 3 per day
- October 2nd Spiny Lobster Season Opens
- October 9th Fall Classic
- November 25th Thanksgiving
- December 25th Christmas

MONTHLY CLUB MEETING & AWARDS BANQUET

APRIL 7th 7:00 PM

This month's club meeting will be held <u>IN PERSON</u>, at Me-n-Ed's Pizzeria

4115 Paramount Blvd, Lakewood, CA 90712

We have reserved 50 seats outdoors, social distancing and masks are REQUIRED

Let's get together and have a good time!

Happy Spring everyone. If the wind ever quits blowing, days like this are in our future.

Seabass hunting has been challenging to say the least in these early spring days but it will get better for sure. I'm going to take the Flattie to Catalina and see if things are fishier there than the coast.

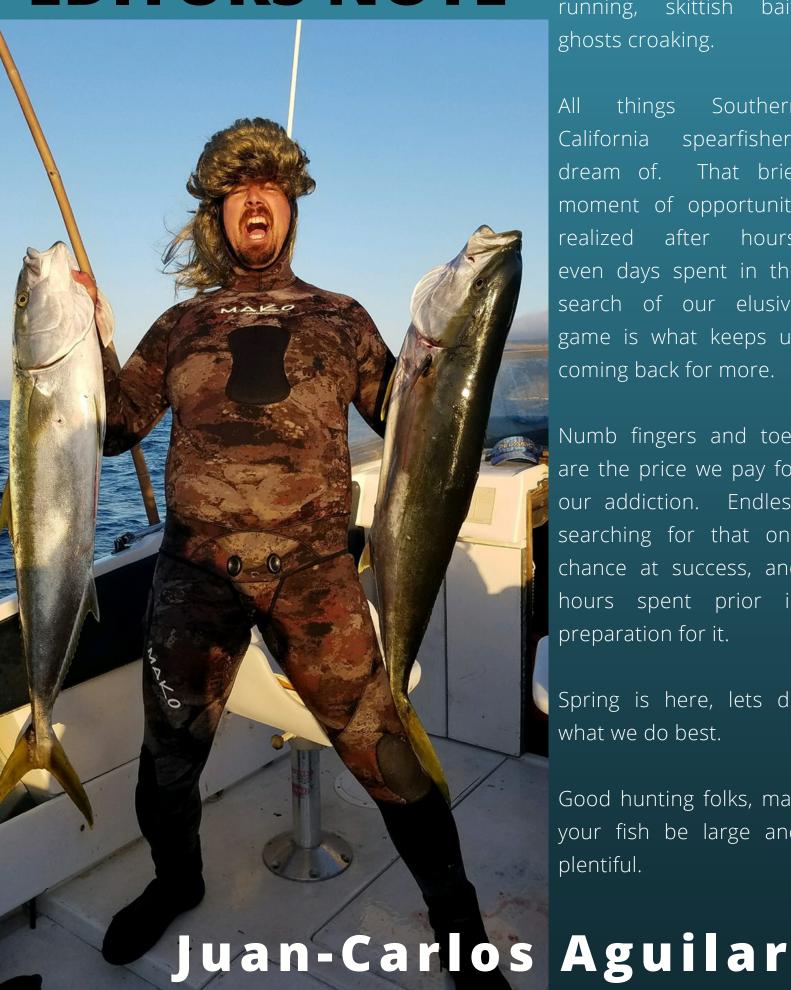

Don't forget the April club meeting (April 7th) will be at Me-n-Ed's and it will be our Awards night. I'm looking forward to handing the trophies to the winners.

This year I hope you all shoot some trophy fish and get in on the competition for the awards. The Calico Derby continues through March and the tentatives can win too. Good luck.

Dive safe everyone, I'll see you soon.

Paul Zylstra

EDITORS NOTE

Tides changing, current running, skittish bait, ghosts croaking.

All things Southern California spearfishers dream of. That brief moment of opportunity realized after hours. even days spent in the search of our elusive game is what keeps us coming back for more.

Numb fingers and toes are the price we pay for our addiction. Endless searching for that one chance at success, and hours spent prior in preparation for it.

Spring is here, lets do what we do best.

Good hunting folks, may your fish be large and plentiful.

New addition to the Neptune family

Let's welcome "BOZO" to the Hughes clan

Two off-duty LAPD officers are free diving at Guadalupe Island, Mexico. They were on a quest to spear giant, bluefin tuna. Both men were brutally attacked by a great white shark. A lucky shot killed the shark almost immediately. The shark's surviving mate—a unique, mutated variant—observed the killing and now demands revenge. She tracked her prey over hundreds of miles of open-ocean, and eventually followed them to Northern California. The magnificent shark had amazing reasoning skills. She was vicious, vindictive and cunning—the ultimate killer. Will she prevail?

During a SWAT raid, the same officers kill the favorite son of the leader of ISIS. The leader unleashed a small band of terrorists to find and kill the men. Sensitive, well-placed bombs were armed and ready to detonate, shots were fired and an unconscious officer had a knife to his throat, one stroke away from losing his head. Can the two officers survive being pursued by these relentless, powerful forces?

PURSUED

THOMAS BLANDFORD

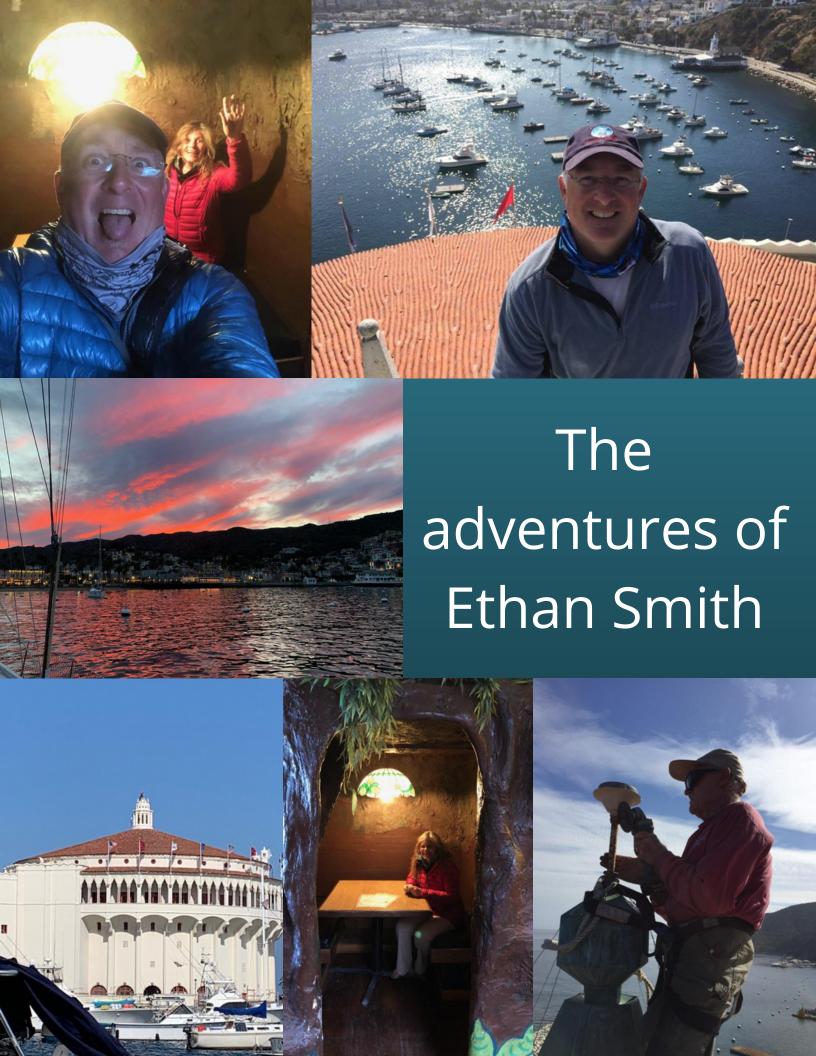

PURSUED

THOMAS BLANDFORD

Here's the cover, back page and spine of a book I just completed. It's about two LAPD cops who are also Neptunes. They are being pursued (hence the name) by a mutated white shark that has evolved into a dangerous variant. The same officers are also being pursued by ISIS assassins for killing the son of the ISIS leader during a SWAT call up. A few Neptunes are named in the book, no worries, they are good guys. It's fiction, of course. I think-- and hope--it will be an entertaining read.

-Tom Blandford

I managed to secure a couple last minute bugs on the closer. Beautiful conditions, calm seas and good visibility. Found the biggest bug canoodling with the second biggest in about three feet of water. I only lasted about an hour in the chilly 59° F water.

-Juan-Carlos Aguilar

Byron Quinonez lands some solid bugs

Anchor Balls

Over the years my back has reminded me that I'm not getting any younger, and that my boat doesn't have a windlass. I had heard of anchor balls from friends, but never knew what they were and how they work. I looked up a few videos and realized that it would be a great addition to my 20 foot Skipjack.

I shopped around the internet, finding prices ranging from \$20 all the way up to \$150 (link). The kits contain an open stainless steel ring, a heavy duty carabiner, a length of line, and a round fender. Luckily, I had all these items, except for the open stainless ring. I looked around the house and found an old bent stainless shaft. I put it in a vise and bent it into the desired shape. As you can see in the pictures, my home brew version isn't as pretty as the store bought ones, but it gets the job done.

The rigging of the anchor ball system is simple, as is its operation. However, care must be taken when purchasing the equipment to ensure the system operates properly and safely.

This system works best in sand, gravel, and mud, but can be used in reef or rocky areas. It is not recommended for use inside the kelp bed (don't anchor **IN** the kelp you kooks). Here's a video (link) I found on YouTube demonstrating the technique. The guy in the video has his anchor only attached on the forward end of the claw anchor. I would definitely advise using the stainless seizing wire described below

I prefer using a "claw" or "Bruce" style of anchor, properly sized for your boat, and rigged for "breakaway". It sounds counter-intuitive to have something as vital as an anchor set up for "breakaway", but it can mean the difference between retrieving your anchor, and either bending or losing it completely.

The "breakaway" setup is accomplished by attaching the shackle to the knuckle, or forward end, of the anchor. Then, using stainless seizing wire (not zip ties!) attach the chain along the shank of the anchor.

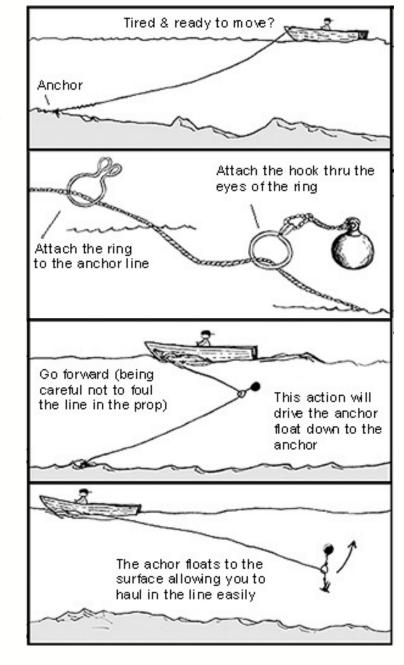

Finally, on the end of the anchor, take a few wraps (I use 3-4) of seizing wire through the nearest chain link and through the hole in the anchor. I use 0.041 inch/1.04mm seizing wire (link) but you may want to use a larger diameter wire on a larger boat.

This allows for the anchor to release in case one of the flukes or fingers of the anchor gets caught under a rock. The seizing wire will break before your anchor line or chain do, and the anchor will be pulled from the forward side where the shackle is attached, lifting clear of the obstruction.

The anchor ball (fender) needs to be large enough to float all your chain and anchor. The carabiner must be high quality, and strong enough to handle the force.

The diagram depicts how to effectively use the system. Once the anchor ball system is deployed on the anchor line, attach the anchor line to the bow or midship cleat, and make a large arching turn at a safe speed. Be very careful to not run over your line! Once the anchor and chain are hanging from the fender, simply turn around and retrieve the anchor rode without having to lift the weight of it.

Using a chain splice (link) to attach the anchor line to the chain allows for smooth operation of this system. If there is a thimble or shackle at that attachment point, it can foul on the open stainless ring of the anchor ball system and make things go awry.

It's a very effective, inexpensive, and quick way to pull your anchor without the need for a windlass.

Be safe folks, and take care of your back! - Juan-Carlos Aguilar

Sea Hunt 2001 Triton 210 Center console 21 ft. \$19,900 obo

Selling my Sea Hunt 21 ft. Center Console/ Wide 8' Beam / Deep V-Hull / T-Top / Mercury 150 two stroke Outboard

Great Boat and well taken care of with regular preseason maintenance. Comes with Brand New VHF radio, New Upgraded Antenna and New Bottom Paint. Includes a 4 step detachable swim ladder. 80 gallon gas tank replaced a few seasons ago.

Also includes a detachable Garmin GPS, quick attach & release Garmin 2 Frequency Fish Finder, Sony Quick Eject Radio and standard Richie Compass. There are 4 marine batteries with switch.

This Sea Hunt is equipped with 2 Bait Tanks that can hold half a scoop each. 6 Stainless Steel Rod holders on T-Top and 6 Stainless Steel Rod Holders comes standard in boat and console.

Also Included is a Magic Tilt Aluminum Trailer, redone with new springs, bearings and 4 new tires in 2020.

Many memories were made at Catalina and Clemente with this great boat. I'm going to really miss her but have to let her go. I just bought a new boat that's more accommodating to my family.
